

Environmental Studies 2013-2014	
The human impact on a stretch of coastline in the Maltese Islands	
INTRODUCTION	
Brief information on the topic of the project by commenting on the exact location of stretch of coastline and its physical (natural) aspects. Include analysis of map and aerial photo of the area.	
Plan of work to explain the ways by which you will be carrying out your investigation	
Body	
Observing how the area chosen has been changed by man. Analyse particular landmarks caught on photos.	
Survey to record the different types of buildings; economic activities; leisure and tourist activities. Display of data gathered through graphs and pictograms.	
Examining the development of the area over the span of time through maps, historical books and newspapers.	
Analysing how the area has been improved by man. Contacting the Local Council to find out whether any plans have been made for this particular area.	
The negative impact caused by human activity. Investigate whether these problems are being addressed by the government or local council. Explain how locals have raised or can raise awareness on these problems.	
Interviewing residents, local visitors and tourists to investigate how they view the human impact in the area whether as positive or negative overall. Analysis of answers given.	
CONCLUSION	
Brief summaries of each chapter and the main conclusions made. Explain how this investigation helped you to understand the local environment and what new know-how and skills you acquired.	
Give your suggestions on how the area can be improved. Focus especially on what young people can do for a positive impact within this area chosen.
